

Web Favorites

Counter clockwise from default Recent Sites. If a user sets focus on a favorite link and taps the RMB, a contextual menu appears with standard Windows functionality for browsers. User's can also select the Manager function to organize, add, modify, or delete from the Favorites list.

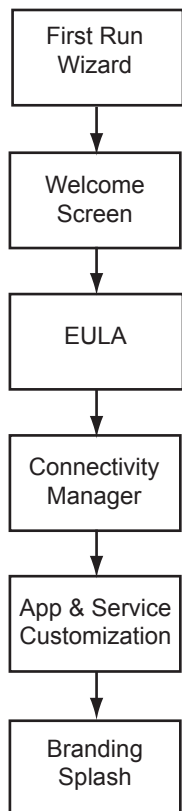

Verizon Online

Clockwise from Web section. This information chunk is a Marketing panel for Verizon. It may include persistent links advertisement and is not configurable by the user.

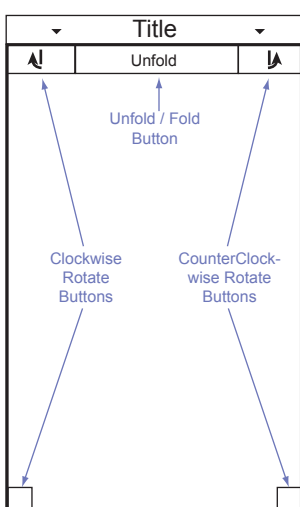

Unfolded View

If a user selects the "Unfold" function, the area from which the function was invoked will display the Bing search field. The two remaining content chunks will not display the Bing search field and will utilize the space to display other advertising or other content which may be below-the-fold. This could include expanded Favorite bookmark views, additional Web thumbnails up to 10, or other Verizon service ads.

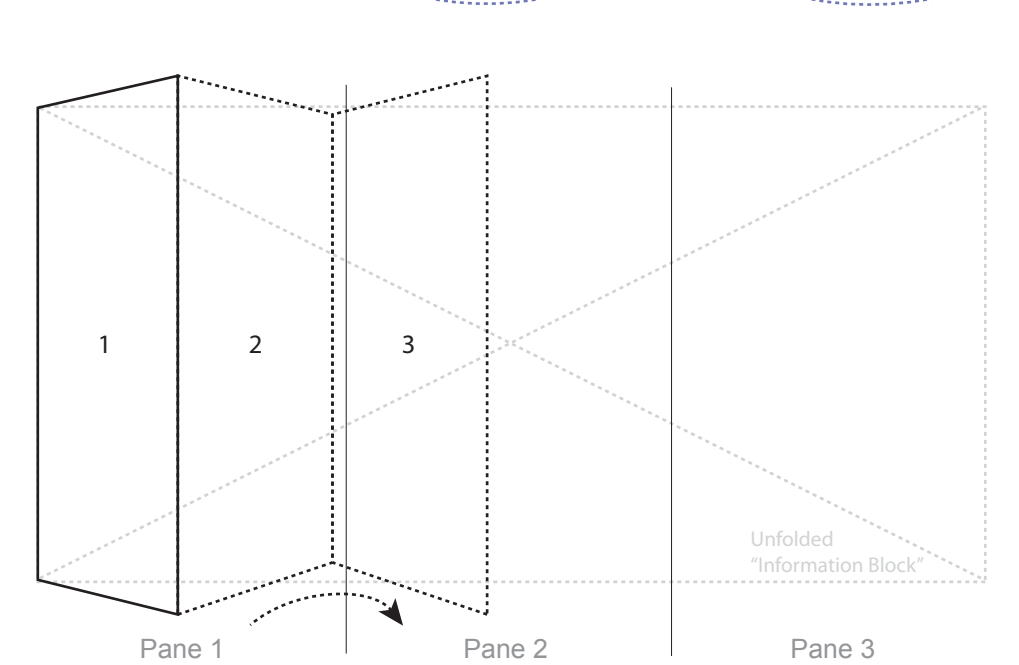

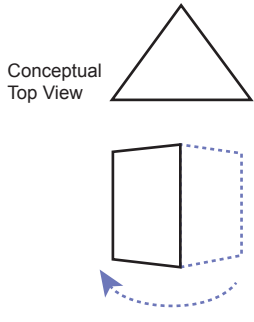

Information Block Interaction Controls

The user will interact with the information block via the rotate control button or the "Unfold" button. If the "Unfold" button is selected, the user will tap it again to refold the information block.

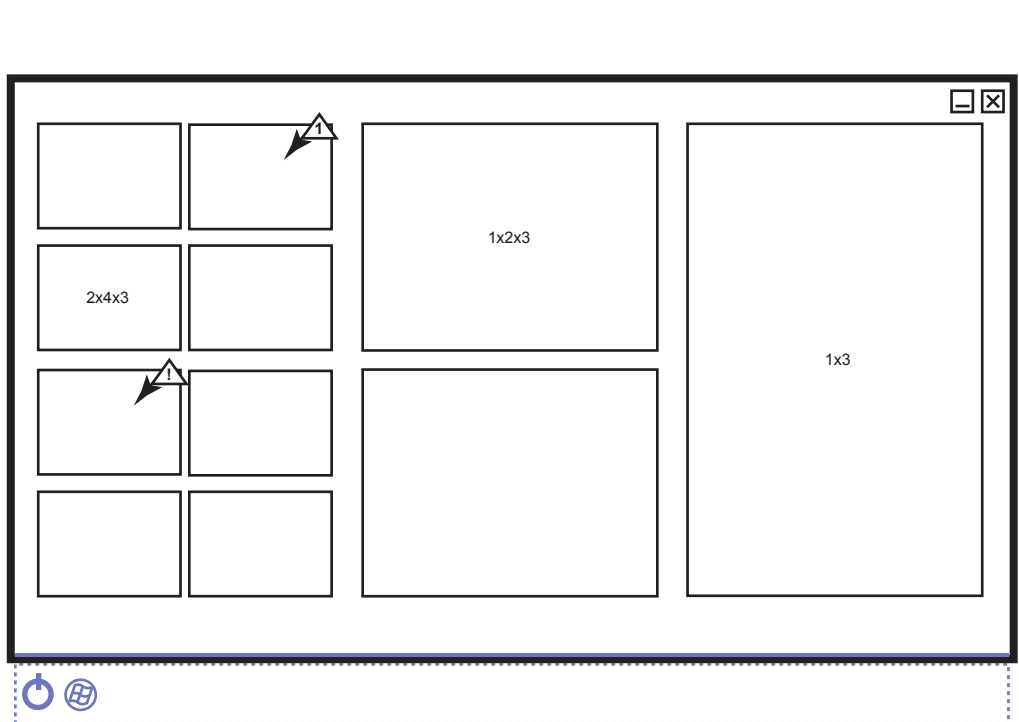

Information Block

Shape is a triangle also known as an "Information Block". When the user taps the rotate button located in the corner of the rectangle face or any of the other corners, the shape rotates to reveal two other relevant information faces. Tapping the right corners will rotate counter clockwise and the left corners will rotate the object clockwise.

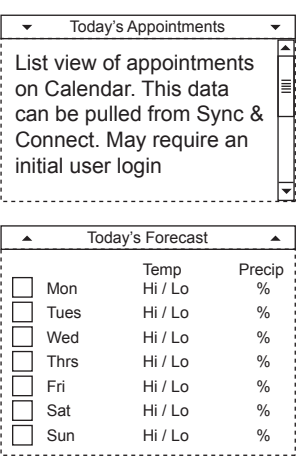

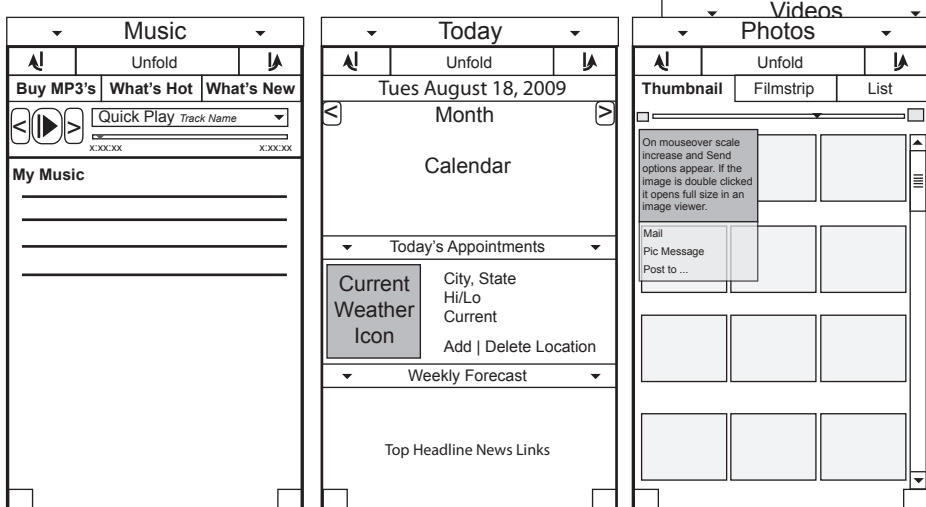

Unfold Effect

In addition to being rotated, each information block can be unfolded. This "flattening" of information will display all continually relevant content simultaneously in one click. This will allow for screen capture of Web pages to be displayed. Present layouts shall also be available in the display settings menu.

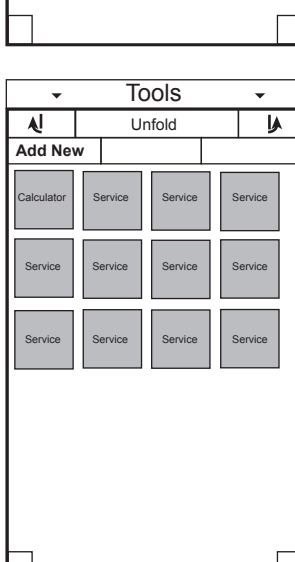

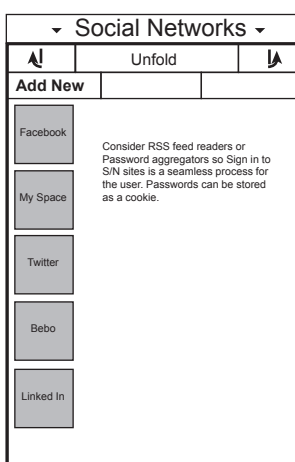

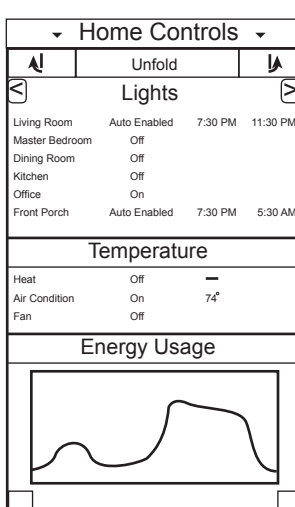

Music Panel

Quick play is a dropdown of recently played songs. Five shall be the maximum of user defined in global settings.

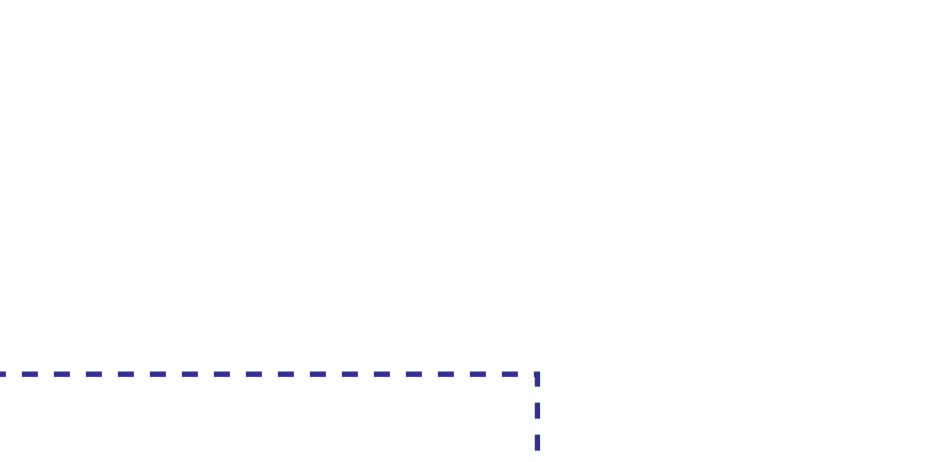

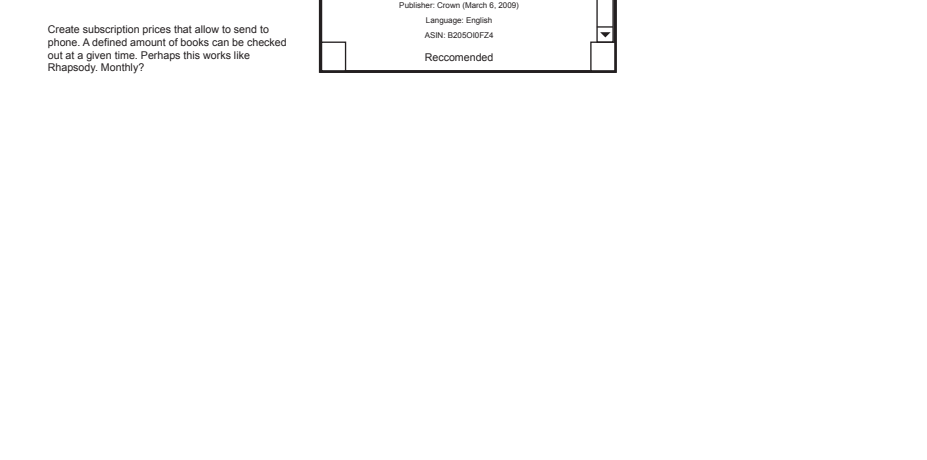

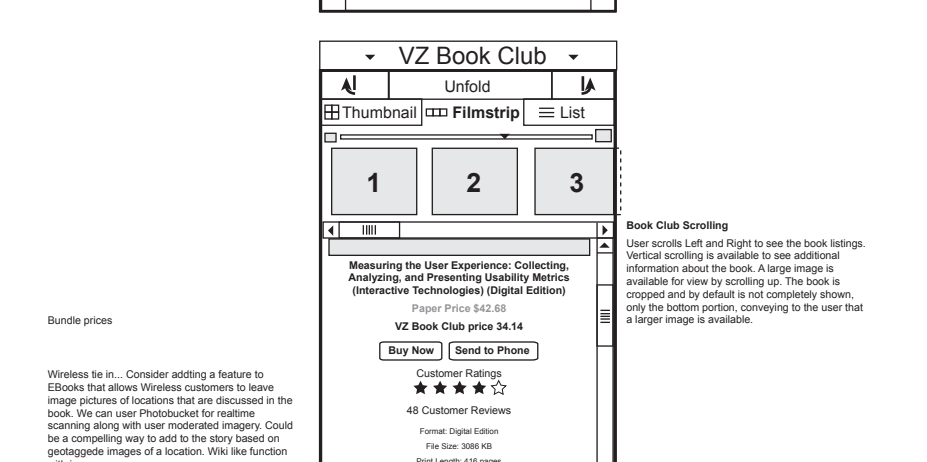

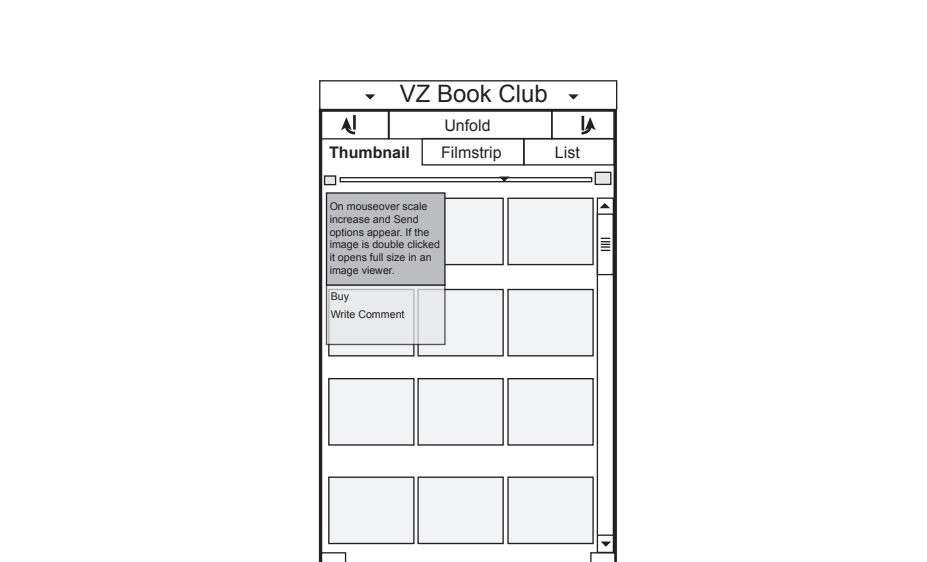

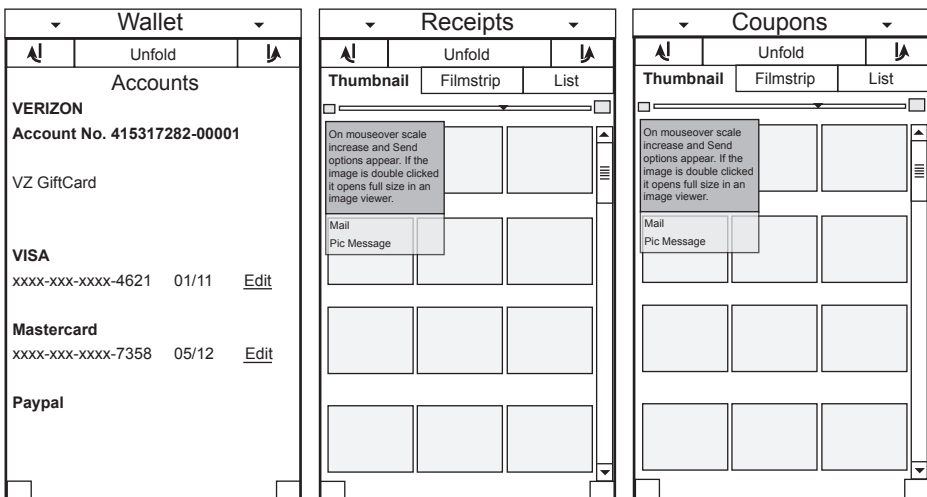

Sub-section Design

Additional information will be available for both Calendar and Weather functions. If a user desires additional information they may select either "Today's Appointments" or "Weekly Forecast". If the user taps on these buttons, the details expand to cover either the Monthly calendar view or Today's Forecast. To return to the default view the user performs the same operation again and the detailed view is minimized.

Configuration Manager

Should be accessible to a user anytime. This manager should help the user with default screen layouts. In addition, the user would be able to add or remove services within the experience.

The manager would connect to a shopping environment where widget services could be displayed. Marketing spaces within the information blocks can also be used to drive updates and discoverability of new services.

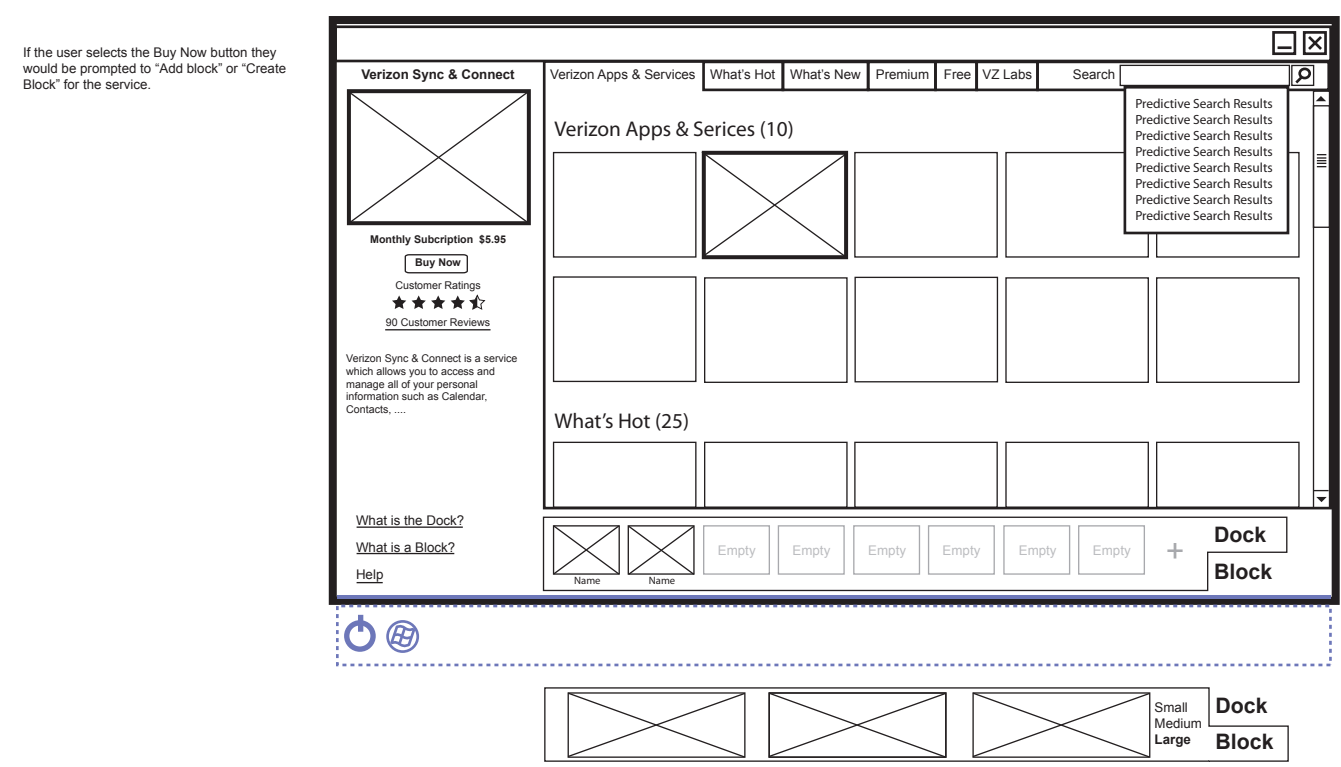

Block Size: Small, Med, Large

If the user is not a subscriber to a Verizon service, it can still be added to a block. The user will be required to provided login credentials to have service functionality appear. If the user is not a service subscriber then a placeholder image only will appear.

One approach for browsing and customization can be using the same display controls that are utilized throughout the UX.

Need the ability to Add, Modify, or Delete from the Dock.

Need the ability to Add, Modify, or Delete from the Dock.

Need the ability to Modify a block of a block.

Need the ability to organize the main screen blocks.

Accommodate three large blocks max.

2x medium blocks, either an additional med block may be added to that column. Up to four small blocks can also be added a column with a single medium block.

A single column may hold up to two blocks in width and four blocks in height. The max height limit on future versions in which scaling is applied to column's block display).
